How risky is it?

The value of the fund can go down as well as up.

One way to estimate the risk is to look at how much a fund's returns change over time. This is called "volatility".

Usually, funds with higher volatility will have returns that change more over time. They normally have a greater chance of losing money and have a greater chance of higher returns.

Funds with lower volatility tend to have returns that change less over time. They usually have lower returns and may have a lower chance of losing money.

Risk rating

Equity funds are generally expected to be of high risk and a growth category of investment. This is due to the fact that the fund invests for capital growth/appreciation, by trying to grow the investors money over time.

For more information about the specific risks that can affect the fund's returns, see the sections entitled "What are the risks of investing in the fund?" and "Who should invest in the fund?" in the fund's explanatory memorandum.

No guarantees

Like most mutual funds, this fund is not guaranteed or insured. You may not get back the amount of money you invest.
